

ComResource created MapEx to help simplify data migration and upgrade efforts with the assistance of mapping conversion.

Utilizing MapEx, you can automatically convert your Gentran or B2B Integrator maps to IBM Transformation Extender maps. Once converted, a mapping analyst quickly completes the map migration by adding a small number of rules and verifying that the new map output matches the original mapping requirements.

## WHAT MapEx DOES FOR YOU

**Faster Migration** – Allows for a quicker migration to an IBM Transformation Extender platform

**Map Asset Documentation** – Creates a mapping specification excel spreadsheet directly from the map source, eliminating the risk of using outdated information

**100% ITX Type Trees for All Formats** – Eliminates the time-consuming and error-prone process of manually building Type Trees for complex proprietary formats

**Reduced Manual Mapping Efforts** – Builds a map with 50% of the mapping logic and is completed with a small number of rules added by a mapping analyst

**Full Suite of Reports** – Allows for complete mapping infrastructure insight via reports on existing maps, their input/output types and mapping logic hosted in a central datastore

## HOW MapEx WORKS

**Documentation of your existing maps**

**Automatic creation of type trees**

**Automatic building of map logic**

**Reporting on your mapping infrastructure**
