

SEARCH SCANNED PDFS IN A SNAP

PDFS CONVERTED INTO SEARCHABLE FILES

Do you have an abundance of PDFs you cannot search easily?
Would it be helpful to copy/paste from those documents?
Are you looking to convert your remaining paper documents to digital format, but not sure where to start?

The ComResource **digiPDF Search** app keeps your data secure by converting your existing scanned PDFs into searchable files – all in your own environment. Using industry-leading Artificial Intelligence, it points at a main folder location to examine hundreds of thousands of scanned documents delivering any/all files related to your search.

 **Get a minimum of 125K Searchable Pages for as little as \$2,500**

Solution Highlights

- Maintains your existing directory structure without overwriting the original files
- Newly created PDF files are searchable within multiple destination types including SharePoint, Windows Explorer, OneDrive, etc.
- Performs AI to extract even some handwritten text, headers and footers, and tables

The ComResource 3 Step digiPDF Search Process

Install application on machine that has access to PDF files

Set-up dependencies for Artificial Intelligence

Start the application

We'd love to hear from you!
