

CONTROL YOUR CYBERSECURITY RISKS

24/7 RISK-BASED VULNERABILITY MANAGEMENT

Do you lack real-time visibility into the security of your IT environment?

Do you have the internal resources and skills to protect the systems that contain and store your business' most critical information?

Are you satisfying insurance liability and compliance standards?

Solution At-a-Glance

The ComResource Risk-based Vulnerability Management Service is a one-stop solution that provides industry standard risk assessments, state of the art penetration testing, and on-going vulnerability management to prioritize and address security vulnerabilities in your critical resources and systems.

The ComResource 3 Step Approach to Vulnerability Management

Risk Assessment

- Identify potential risks and assess the impact of those risks in a priority ranked report
- Address gaps in processes to improve mitigation of cyber risks, prevent attacks, reduce costs, protect revenue, and increase business reputation

Penetration Testing

- Conduct scheduled and/or ad-hoc simulated attacks mimicking real-world hacking methods
- Provide detailed report highlighting active exploitable vulnerabilities and how they could affect your organization

Vulnerability Management

- Continuous tracking of known and unknown assets and their vulnerabilities
- Interact with custom dashboards to prioritize risks, automate processes, and maximize ROI
