Integrate Smarter in Less Time

Flex Addon to IBM's B2B Integrator

ComResource's Flex provides the simplest and most efficient approach to implementing your integration solutions with industry best practices while maintaining the ability to build a unique configuration to fit the needs of your business. It offers streamlined process patterns and methodologies that allow you to simplify the setup of your business processes and quickly on-board new partners.

Ease of a Framework but without the constraints! Frameworks provide pre-built flows but cost you flexibility by making you adhere to their constraints. They are costly and need to be maintained when new versions are released. Flex is independent from the IBM version by using the standard import/export service and is fully supported since there are no custom services or adapters.
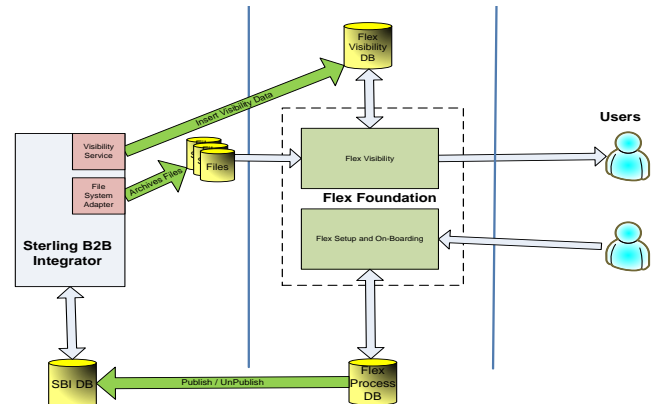

Flex Architecture

Flex is built around the idea that the communication should be separate from the data processing. We then provide a staging area at the source and again at the target so you can easily find your data and restart or resend if needed.

Built to use standard Product Features like Properties Files and Search Capabilities!

Flex is not a separate product. It is merely a new set of screens to:

1. **Onboard Partners by selecting flow activities**

2. **View files and documents with the ability to search, filter, correlate and replay**

Flex Visibility

Flex provides document level visibility while still being able to batch process for performance. Error notifications and archiving are built in to all processes so no need to do special logic to catch errors.

- End-to-end visibility with drill down to detail
- File Level, Document Level, and Field Level Views
- User security and role-based permissions
- Errors viewable with links to B2Bi
- Dynamic reporting and search capabilities

Easily identify status of files and docs

Restart or Resend from dashboard

Drill down to see details and link to B2Bi

What you Get

- ➢ GUI for configuring partners, docs, and process flows
- ➢ Embedded Error Handling with Email Notifications
- ➢ Automatic Archiving for before and after processing
- ➢ Flexible pre-built processes to perform basic data manipulation
- ➢ Ability to run your own custom business processes within the data flow
- ➢ Long term repository with document fields retained
- ➢ End-to-End File and Document visibility
- ➢ Restart/Resend capabilities at file or document level
- ➢ Correlation of documents by any field (i.e. PO#)
- ➢ Segregation of Partners to limit user access

Flex Benefits

Proven Process Patterns from years of experience that allow you to run your business processes, not someone else's that you try to make work.

Best Practices that take advantage of the core product features that will be fully supported with new versions.

Long Term Visibility keeping data after it is purged in the system. Search, filter, correlate and report on data at any time.

About ComResource

ComResource, Inc., a Columbus-based technology consulting firm, offers Integration Services, Professional Services, Data and Infrastructure Services to help companies implement, manage, and operate their IT solutions.

At ComResource, we value our customers, partners and every member of our team. We have over 250 years of combined e-Commerce experience and have created a practical service balanced with a cost-conscience approach in order to provide a valued-managed service offering that will show immediate ROI for our customers. Whether you are a large corporation looking to supplement your existing staff or a small to medium business looking to offload your entire integration services, ComResource can develop, implement, and support your solution.
